

Strengthening Project Management Information System Through mHealth: The JSI/L10K Experience

April 19, 2012 Nairobi

Ethiopia Health Extension Program (HEP)

The Last Ten Kilometers Project (L10K) - MIS

Challenges of the L10K MIS

Accuracy

- Paper based tally, tracking & compilation formats increased error as it is manual entry

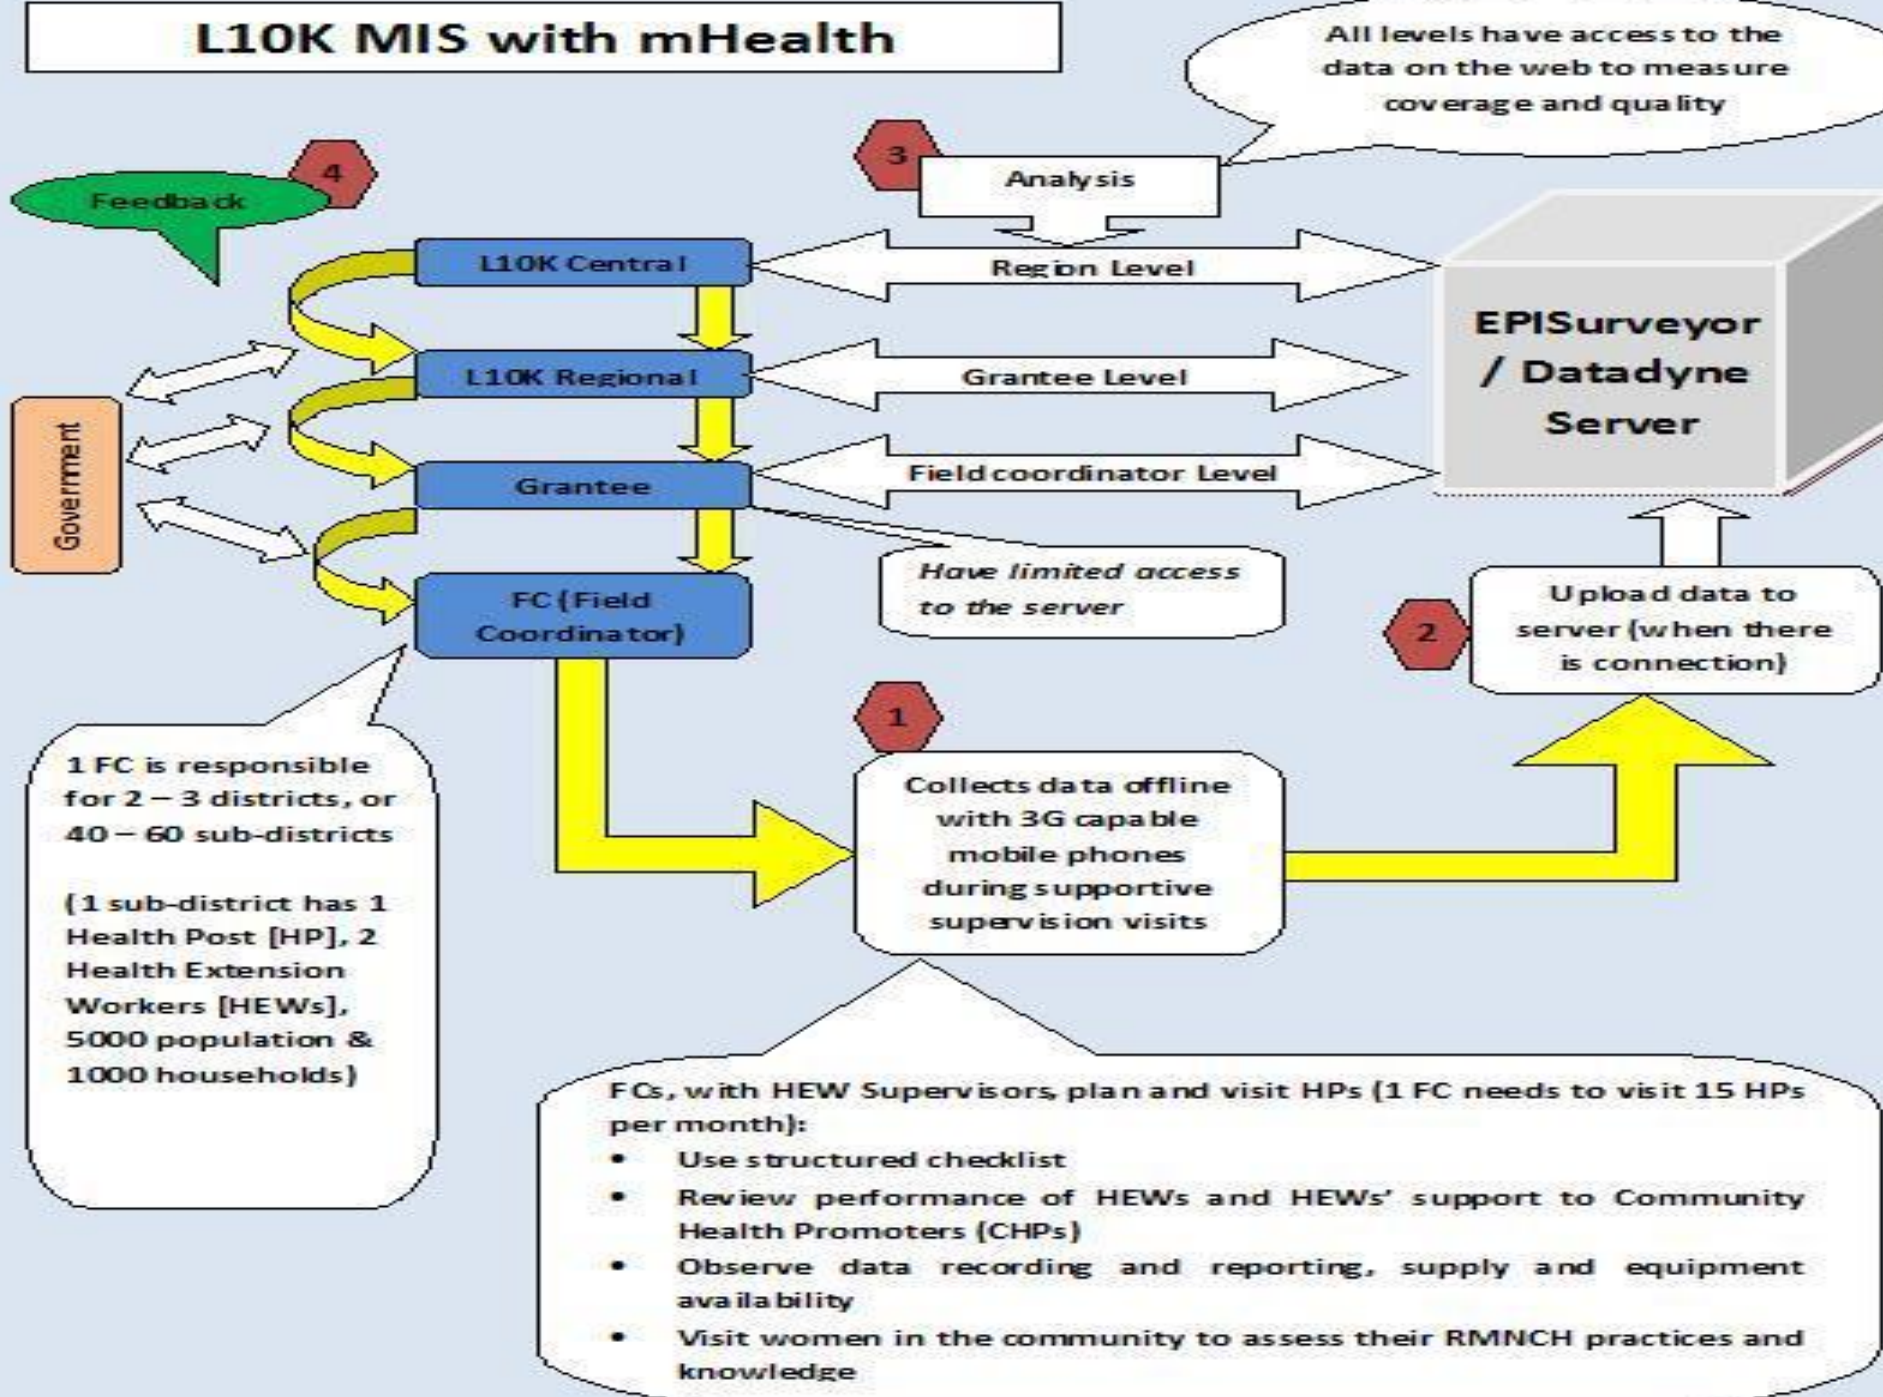

Timeliness

- SS visits are conducted but data from the paper checklists not timely aggregated & potentially utilized
- Reporting process passed different levels which contributed to delay to use them timely
- Delay to get quarterly reports and give feedback

Utilization

- Not strong process of data collection and analysis for decision making

L10K MIS with mHealth

Impact of mHealth ...

- made the M&E system more efficient
- encouraged data-based decision-making at all levels
 - Data demand improved and feedback loop created
- Improved data quality (timeliness & accuracy)
- Allows very simple data cross checking
- Simplified data interpretation and use
- Data use reflected at planning and review meetings
- Recognized as an expert and taking part in the recent national mHealth/eHealth strategy development

Thank you !
